100 Smart Cities

Honourable Prime Minister **Shri Narendera Modi** has announced the setting up of 100 Smart Cities and renewal of 500 existing urban cities. Recently, the Union Budget presented by Finance Minister **Shri Arun Jaitley** has allocated Rs. 7,060 crores for 100 Smart Cities in the current fiscal.

By 2050, more than 70 per cent of the world population would be living in cities. In future, cities will account for 90 per cent of the global population growth and 80 per cent of the wealth creation. Developing better strategies for the creation of new cities is, therefore, imperative. The demand for urban infrastructure and services will increase manifold while the stress on the environment will keep mounting. Over a trillion dollars of investment would be needed to meet the projected demand in our cities. Are we ready to face these enormous challenges? How will we leverage the networked technologies to improve the quality of urban life?

Technology and innovation are the hallmarks of the modern edification. As the world rapidly urbanises, cities will be defined more by the ideas they generate than just by the splendidness of their physical infrastructure. It is, therefore, essential to create the right urban ecosystem that stimulates innovation on the one hand, and that facilitates the provision of smart and sustainable civic services on the other.

Smart City is a well-performing city in a forward-looking way in economy, governance, mobility, environment and livelihood, and built on the smart combination of endowments and activities of self-decisive, independent and aware citizens. A smart city is just not of sensors, broadband infrastructure, hot spots, water and sanitation solutions and smart grids. At the heart of smart cities are smart inhabitants, smart governance, smart lifestyle and the smart economy driven by innovation. It takes 20-30 years to build a new city. How do we plan and mobilise skills and resources to create sustainable SMART CITIES?

Smart cities need to identify and procure the best technical solutions for their communities and businesses whilst demonstrating the local economic benefit of that procurement. The purpose of this conference is to identify essentials of a smart city, the barriers and potential solutions for planning and implementation of smart city using innovative technological solutions, and financing in order to develop cities with smart, congenial, intelligent and sustainable environments.

Programme Synopsis

100 Smart Cities: Vision for Smart India

Urbanisation is Unstoppable	 Sustainable Development
Planning Aspects	O Policy Formulation
Essentials of Smart City	100% Digital Connectivity
○ 100% Water & Power	Housing and Transport
○ 100% Sanitation	Health, Education and Security
Sources of Funding & Time Frame	Case Studies: Domestic/International
